Attempt : 1
Total Mark : 10
Marks Obtained : 10

Section 1 : COD

1. Problem Statement

In a ticket reservation system, you store the available seat numbers in a TreeSet. Users input their desired seat number, and the program checks whether the chosen seat is available.

Using a TreeSet ensures quick and efficient verification of seat availability, ensuring a smooth and organized ticket booking process.

Input Format

The first line of input contains a single integer n , representing the number of available seats.

The second line contains n space-separated integers, representing the available seat numbers.

The third line contains an integer m , representing the seat number that needs to be searched.

Output Format

The output displays "[m] is present!" if the given seat is available. Otherwise, it displays "[m] is not present!"

Refer to the sample output for the formatting specifications.

Sample Test Case

Input: 4

2 4 5 6

5

Output: 5 is present!

Answer

// You are using Java

```
import java.util.Scanner;
```

```
import java.util.Set;
```

```
import java.util.TreeSet;
```

```
public class Main {  
    public static void main(String[] args) {  
        Scanner scanner = new Scanner(System.in);  
        if (!scanner.hasNextInt()) {  
            scanner.close();  
            return;  
        }  
        int n = scanner.nextInt();  
        Set<Integer> availableSeats = new TreeSet<>();  
        for (int i = 0; i < n; i++) {  
            if (scanner.hasNextInt()) {  
                availableSeats.add(scanner.nextInt());  
            } else {  
                break;  
            }  
        }  
        if (!scanner.hasNextInt()) {  
            scanner.close();  
        }  
    }  
}
```

```
        return;
    }
    int m = scanner.nextInt();
    if (availableSeats.contains(m)) {
        System.out.println(m + " is present!");
    } else {
        System.out.println(m + " is not present!");
    }

    scanner.close();
}
}
```

Status : Correct
