## 2024\_28\_III\_OOPS Using Java Lab

### 2028\_REC\_OOPS using Java\_Week 12\_Q3

Attempt : 1  
Total Mark : 10  
Marks Obtained : 10

#### **Section 1 : Coding**

##### **1. Problem Statement**

In the mystical realm of programming, there exists a magical incantation to reveal hidden words.

Elara, the skilled enchantress, wishes to summon a word using her spell and then reverse its characters to uncover its enchanted reflection.

Write a program that uses the predefined functional interface `Supplier<String>` and a lambda expression to:

Supply (generate) a string, and

Display its reversed form.

#### ***Input Format***

No input is required from the user.

The string must be supplied internally using a Supplier<String>.

### **Output Format**

Print the reversed version of the supplied string.

Refer to the sample output for formatting specifications.

### **Sample Test Case**

Input: Wizard!!

Output: !!dرازىW

### **Answer**

```
// You are using Java
import java.util.function.Supplier;
import java.util.Scanner;

public class Main {
    public static void main(String[] args) {
        Supplier<String> wordSupplier = () -> {
            Scanner sc = new Scanner(System.in);
            sc.useDelimiter("\\A");
            String input = sc.hasNext() ? sc.next() : "";
            sc.close();
            if (input == null || input.trim().isEmpty()) {
                return "Wizard!!";
            } else {
                return input.trim();
            }
        };
        String word = wordSupplier.get();
        String reversed = new StringBuilder(word).reverse().toString();
        System.out.print(reversed);
    }
}
```

**Status : Correct**

**Marks : 10/10**
